### SIEMonster map fix.

Due to the recent changes in MapQuest access Kibana will no longer render maps in Visualizations.

To correct this issue please define a new WMS compliant map server as follows:

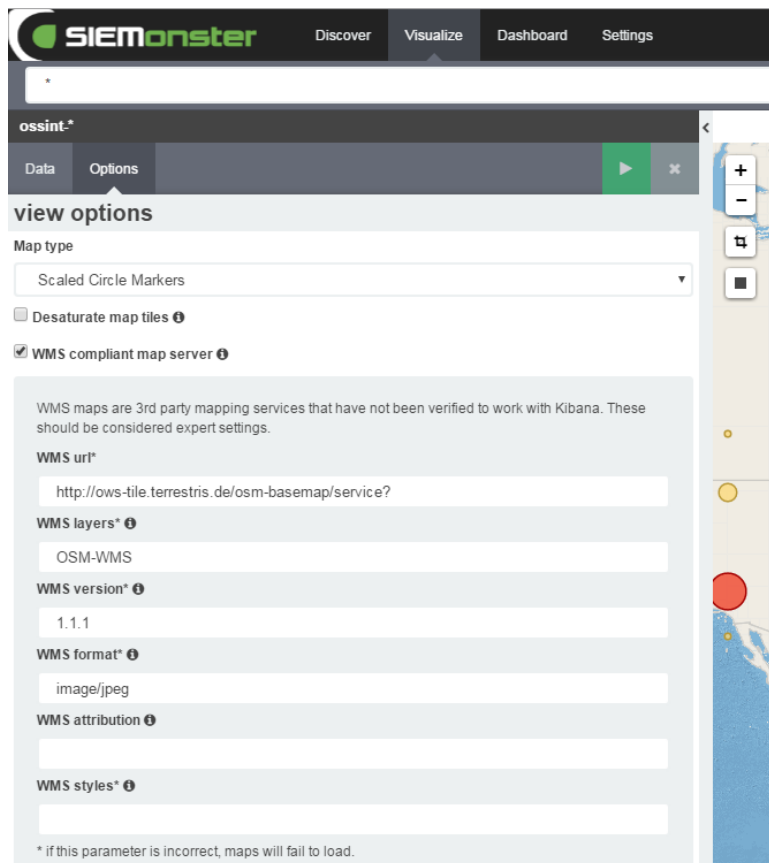

In Visualizations - Tile Map - Options, set the following values:

WMS URL: <http://ows-tile.terrestris.de/osm-basemap/service?>

WMS Layers: OSM-WMS

WMS Version: 1.1.1

WMS format: image/jpeg

The screenshot shows the 'view options' dialog in the SIEMonster interface. The 'Options' tab is selected. The 'Map type' dropdown is set to 'Scaled Circle Markers'. The 'Desaturate map tiles' checkbox is unchecked. The 'WMS compliant map server' checkbox is checked. Below this, there is a text area with a warning: 'WMS maps are 3rd party mapping services that have not been verified to work with Kibana. These should be considered expert settings.' The 'WMS url\*' field contains 'http://ows-tile.terrestris.de/osm-basemap/service?'. The 'WMS layers\*' field contains 'OSM-WMS'. The 'WMS version\*' field contains '1.1.1'. The 'WMS format\*' field contains 'image/jpeg'. The 'WMS attribution\*' and 'WMS styles\*' fields are empty. A footer note states: '\* if this parameter is incorrect, maps will fail to load.'
